Paper Title: A Developmental Essay

Section 1. Introduction

In this paper, I will argue that Z is the case. In section 2, I will explain problem / concept / theory Y. After explaining this problem, in section 3, I will provide an argument that Z is the case. In section 4, I consider and respond to an objection to my argument that Z is the case. Finally, in section 5, I will summarize my results and point to limitations and areas where further research is needed.

Section 2. Clarification of a Problem

In this section, I will clarify a problem / concept / theory Y.

“Nunc sed pede. Praesent vitae lectus. Praesent neque justo, vehicula eget, interdum id, facilisis et, nibh.” (Agler 2024, p. 34)

Next, I will explain the above passage. This passage makes two key claims. First, when the author says X, what is meant is [...]. Second, it says ...

To illustrate the first claim, it is helpful to think of the following example [...]

Section 3. Argument

Now that problem Y has been clarified, I will argue that Z is the case. To support this claim, consider the following argument:

- P1: A proposition
- P2: A proposition
- C: Z is the case (conclusion)

P1 says A. This premise is true because of C. P2 says B. This premise is true because of D.

In this section, I have shown that Z is the case.

Section 4. Objection and Response

In the previous section, I argued that Z is the case. In this section, I consider a criticism to this view and I respond to that criticism.

One criticism is P1 is false. Explain why.

There are at least two responses to this criticism. First, ... Second, ...

Section 5. Conclusion

In this paper, I have shown that there is a powerful argument in support of Z.
